PAIRING Z-WAVE DEVICES

Pairing Z-Wave Devices

- ▶ Most homeowners will want to add additional Z-Wave smart home devices to their home, such as light switches, lamp modules, locks, or thermostats.
- ▶ Pairing such a device to your system is easy with the following steps...

Pairing Z-Wave Devices

1. Install the Z-Wave device as directed by the devices instructions. If it is a lamp or appliance module, connect the lamp or load to the module and be sure the power switch on the lamp or load is on.

Pairing Z-Wave Devices

- From the Z-Wave toolbox screen, press the add devices button. The Go!Control panel will display *Discovering Devices* and wait for a signal from a device.

Pairing Z-Wave Devices

3. Press and quickly release the program button on the device. Some devices may need to be pressed twice, like a double-click.

Pairing Z-Wave Devices

4. When the device is discovered, the display will show its type, manufacturer, and network node information assigned to the device.
 - Repeat these steps for any additional devices that need to be added to the network at this time.

Pairing Z-Wave Devices

5. If you are unable to add a Z-Wave device to your system, then you will need to contact your dealer to adjust the dealer settings on your control panel.
