REMOVING Z-WAVE DEVICES

Removing Z-Wave Devices

- ▶ When a device will no longer be used in the home control network, it should be removed from the network so the system will not try to communicate with the missing device.
- ▶ To remove one or more devices from the network, use the following steps...

Removing Z-Wave Devices

1. From the Z-Wave toolbox screen, press the remove devices button. The Go!Control panel will display discovering devices and wait for a signal from a device.
2. Press and quickly release the program button on the device. Some devices may need to be pressed twice, like a double-click.

Removing Z-Wave Devices

3. When the device is discovered, the display will show a device has been removed from the network.
4. **Repeat the steps for any additional devices that needed to be removed from the network at this time.**
5. Press back when finished.
